

# 2019 Risk Transfer Program

June 18-19, 2019

# 2019 Coastal Account Layer Chart

## Personal Residential and Commercial Residential

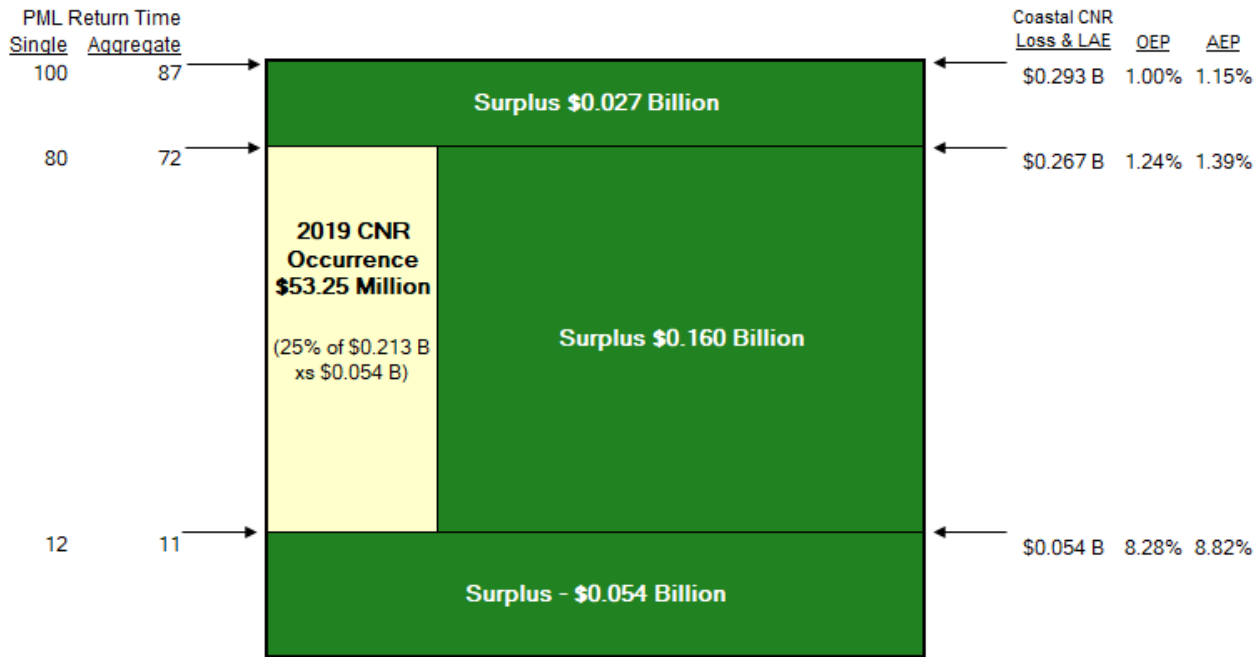

For Coastal Personal Residential, Commercial Residential and Commercial Non-Residential in total, approximately 28% of Coastal Account surplus is exposed in a 1-in-100 year event. Surplus remaining after a 1-in-100 year storm can fund a 1-in-57 year event, additional LAEs, or multiple smaller storms in this or subsequent years.

(Not to scale)

# 2019 Coastal Account Layer Chart

## Commercial Non-Residential

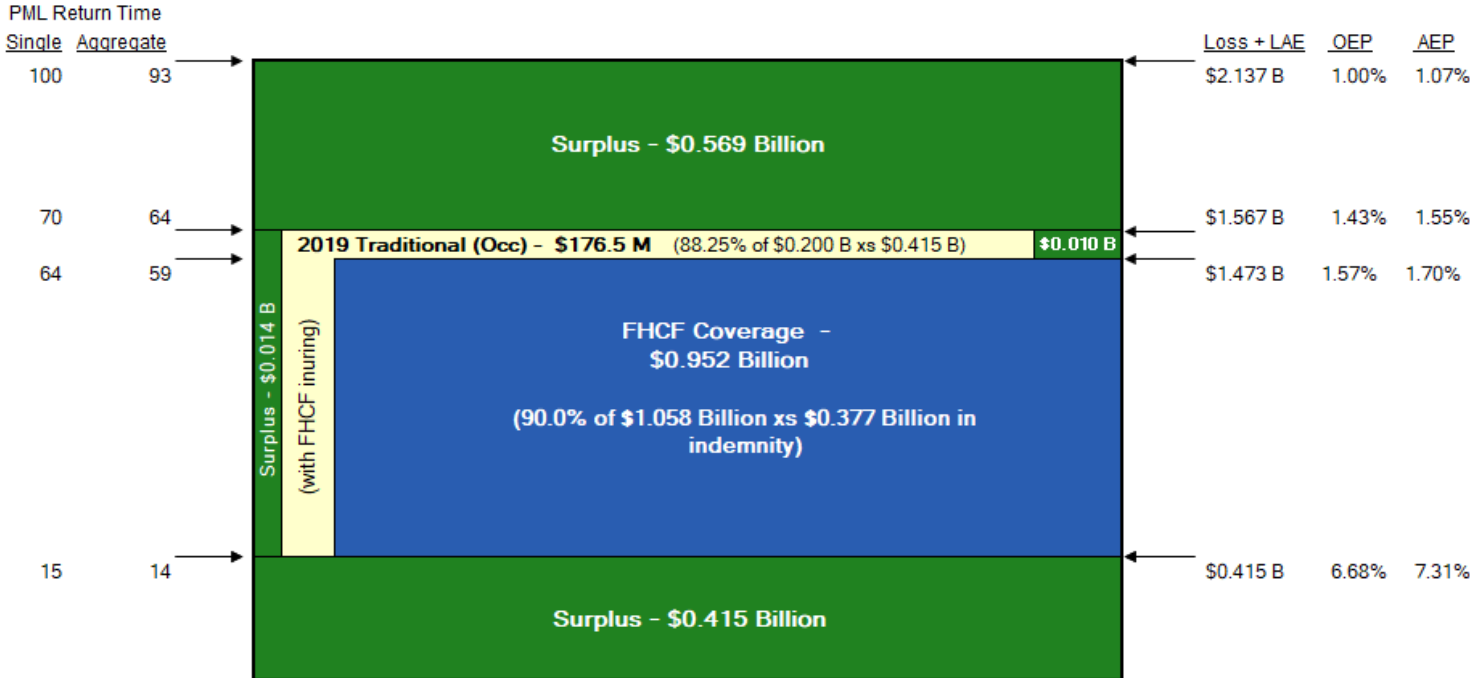

For Coastal Personal Residential, Commercial Residential and Commercial Non-Residential in total, approximately 28% of Coastal Account surplus is exposed in a 1-in-100 year event. Surplus remaining after a 1-in-100 year storm can fund a 1-in-57 year event, additional LAEs, or multiple smaller storms in this or subsequent years.

(Not to scale)

# 2019 PLA Layer Chart

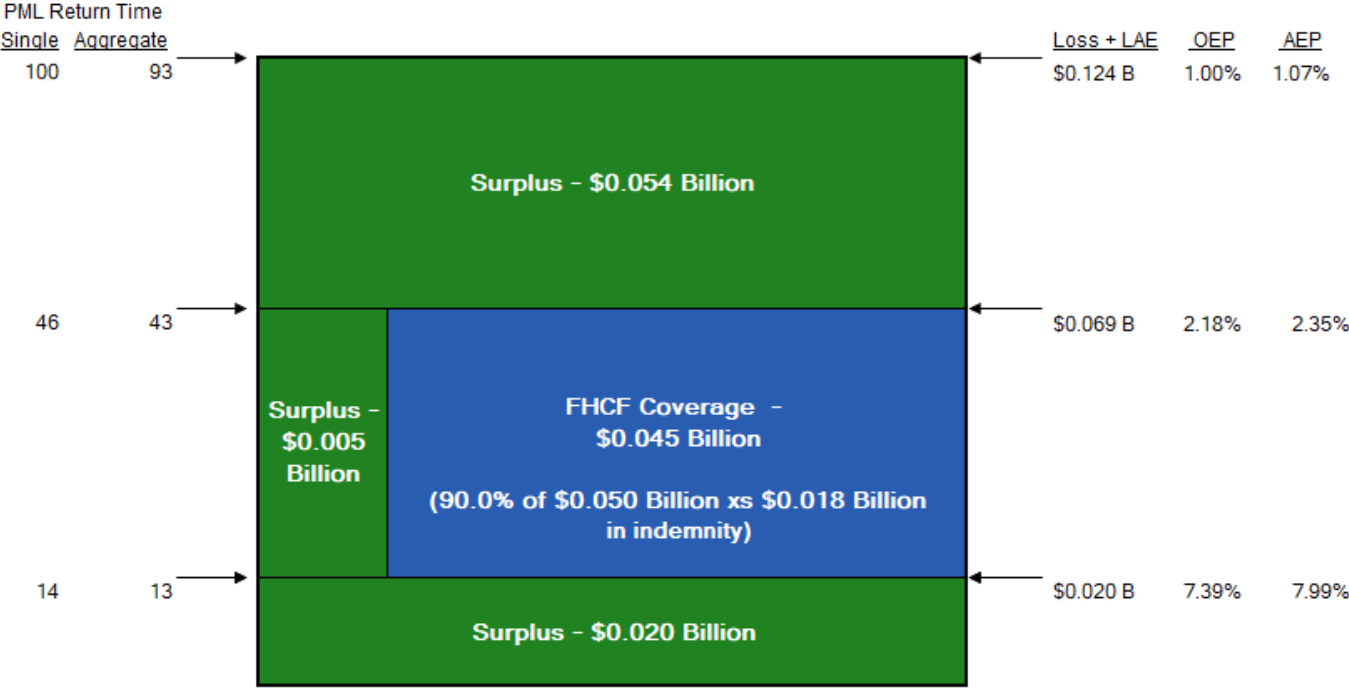

Approximately 58% of PLA surplus is exposed in a 1-in-100 year event. Surplus remaining after a 1-in-100 year storm can fund a 1-in-27 year event, additional LAEs, or multiple smaller storms in this or subsequent years.

(Not to scale)

# 2019 CLA Layer Chart

Approximately 4% of CLA surplus is exposed in a 1-in-100 year event.

(Not to scale)

# Notes and Assumptions

## 2019-2020 Storm Season

### ASSUMPTIONS

- Citizens' 2019 Budgeted DWP \$848 Million (Coastal \$291 Million; PLA \$546 Million; CLA \$11 Million)
- Citizens' Policyholder Surcharge Maximum % Per Account 15%
- 2019 Regular Assessment Base (projected) \$49.6 Billion
- Regular Assessment Maximum % Per Account 2% for Coastal; 0% for PLA/CLA
- 2018 Emergency Assessment Base \$50.4 Billion
- PMLs are based on modeled losses as of December 31, 2018 per AIR Hurricane Model for the United States Version 16.1.0 as implemented in Touchstone Version 6.0.0. Coastal Residential losses are reduced by 6%, Coastal Non-Residential losses are reduced by 20%, PLA losses are increased by 4% and CLA losses are reduced by 12.5% (PLA/CLA combined are increased by 3.1%) to reflect estimated changes in exposure by mid-storm season. All PMLs reflect the Standard Sea Surface Temperature (SSST) Event Catalog including Demand Surge, excluding Storm Surge, and include 10% of loss to account for loss adjustment expense (LAE).
- Interim Return Periods are derived by Linear Interpolation
- 2019 Projected Surplus = unaudited 2018 surplus + 2019 budgeted net income – reinsurance cost adjustments
- FHCF pays 10% of reimbursed loss for loss adjustment expense
- Citizens' 2019 FHCF coverage is based on preliminary retention and coverage estimates. Actual Citizens' FHCF attachment and limits of coverage could differ significantly from estimates

### NOTES

These charts are imperfect! They attempt to show projected claims-paying resources, but they are approximations only. Four significant complicating factors are described below:

- 1) Coastal PML vs. PLA/CLA PML: An actual 100-year PML event in the Residential portion of the Coastal Account may not be a 100-year PML event for PLA/CLA or for the Non-Residential portion of the Coastal Account. The relative magnitude of actual losses for Coastal and PLA/CLA will depend on the storm size and path
- 2) Combining PLA and CLA: The PLA and CLA are separate accounts for deficit calculation and assessment purposes, but are combined for FHCF and credit purposes. It is impossible to accurately show the PML resources situation of these accounts on either separate or combined charts since simplifications must be made in either case that could prove materially inaccurate
- 3) Non-residential exposure: Commercial non-residential (CNR) exposures in the CLA and Coastal Account are not reinsured by FHCF. Coastal CNR losses are shown in a stand-alone chart and correspond to the actual CNR's PML and return periods. CNR is a small portion of the CLA Account and so is not considered in that chart.
- 4) Liquidity: These charts do not show the liquidity needs of the accounts. An account with ample PML resources may still require liquidity as many of the PML resources are not available immediately following a major hurricane. The timing and magnitude of receivables such as FHCF recoveries and assessments are unknown.
